SIMPLEKEY LITE

STAND-ALONE DOOR CONTROLLER

Employing many of the proven features and benefits of the industry leading SimpleKey2 product range, it gives a cost effective solution for smaller systems that do not require remote Resident/Contractor/Staff token administration.

SimpleKeyLite works with the existing Simplekey range of proximity readers and Shark Tooth tokens, allowing tokens to be simply assigned to a flat with a colour reference, using a single selection wheel for all programming.

By enabling tokens to be assigned directly to flats, no paper records are required and with the ability to either set the system up either at the SimpleKeyLite door controller or via a simple to use software program, blocks can pre-programmed prior to or during the installation.
